

Identikey SDK Starter Package

VASCO offers IDENTIKEY Server software with full support and guidance

VASCO DATA SECURITY offers IDENTIKEY as a complete authentication solution for financial institutions. The total offer includes the Identikey Server Banking Edition software, an Integration SDK, extensive product training and consultancy as well as Professional Services for integration.

Identikey Server 3.x is a centralised server platform for user authentication and transaction validation that can be integrated at the front-end with webbased applications and at the back-end with legacy authentication systems. Identikey Server is PCI-DSS compliant and supports One-Time Password and e-Signature validation, EMV-CAP and HSM for ultimate security. Identikey is the perfect protection for access to internet banking applications as well as to the internal banking network.

Identikey Server runs on top of the existing infrastructure which results in a high ROI and lowest TCO, as existing knowledge and Administration procedures can stay in place. Installation is straight forward and usage is transparent.

This integration into webbased applications requires in-depth product knowledge and programming capabilities. VASCO is offering the Identikey SDK Starter Package as a customer-oriented service to help and guide the integration.

The Identikey SDK Starter Package is offered as part of the total solution and is highly recommended to those customers who want to take full advantage of the software.

It includes in-depth and complete Product Training on Identikey Server 3.x and the SDK, integration steps and guidelines on best practices and performance..
